

MELTING TRUCK

GENERAL

Melting trucks are built on 2-4 axle chassis and with 2-4 preheaters.
Twin preheaters 2x800-2x1.900L or 4x1.200 are the most common choices.
All preheaters with indirect heating.
The preheaters are designed to make a fast and careful melting of the material by a special-designed agitator together with an agitation program (Can-bus).
Option for filling big bags and crane, which makes it easy to handle the big bags.

Instruments and switches are placed in the cab, safely away from traffic, noise and exhausts.

Hydraulic and electric power as well as the diesel oil is taken from the chassis.

TECHNICAL SPEC.

Length:	Chassis dependant
Width:	2,55m
Height:	3-8-4,0 m
Total weight:	18-32 000kg
Melting set:	Customers' choice
Crane:	Option
Big-bag-emptier:	Option
Burners:	Riello RG2 230V
Temp regulators:	CAN-BUS
